

ENERGY STAR[®]

Save 200,000 kWh of Energy All in a Day's Rest — ENERGY STAR[®] Monitor Power Management

Organizations like yours can save energy and money by enabling power management on their computer monitors. Free software tools and services from ENERGY STAR automatically put monitors to rest organization-wide when not in use—saving a significant amount of energy

and money. What's more, monitor power management will not affect your computer or network performance. A simple touch of the mouse or keyboard "wakes" the machine within seconds.

Save Energy and Money With Monitor Power Management.

Enabling monitor power management could save your organization approximately 200,000 kWh per year for every 1,000 monitors. This amounts to:

- \$20,000 per year saved at 10 cents/kWh.
- Enough energy to power 230 households for one month

Enable Power Management Organization Wide Quickly and Easily. ENERGY STAR monitor power management offers software tools and services to:

- Turn on monitor power management through the network rather than machine-by-machine using the EZ Save software tool.
- Use the capability of Windows 2000 to enable power management throughout your organization.
- Allow end users to individually enable monitor power management quickly and easily through the EZ Wizard web-based software tool.

To download the EZ Wizard software, and install in on your computer, go to:
